WAN Technologies and VPN Assignment

1. Phone to Instagram Server WAN Diagram

[Phone]
  | WiFi
[Home Router]
  |
[ISP Network]
  |
[WAN Router 1]
  |
[WAN Switch/Router 2]
  |
[Instagram Servers]

2. WAN Technologies Comparison

Technology	Speed	Cost	Typical Use
MPLS	High	High	Large enterprises, Zomato offices
Leased Line	Very High	Very High	IRCTC data centers, corporate HQs
Broadband Internet	Medium-High	Low	Homes and small offices

3. How a VPN Uses WANs

A VPN creates an encrypted private tunnel over a public WAN such as the Internet. When connected to public WiFi in a coffee shop, data from apps like Spotify or YouTube travels through the secure VPN tunnel to the VPN server before reaching the destination service, protecting traffic from eavesdropping and interception.

4. Recommended WAN for Flipkart Warehouses

Recommended Technology: MPLS (Multiprotocol Label Switching).

Reason 1: MPLS provides reliable and predictable performance for connecting multiple warehouses across cities such as Ahmedabad, Mumbai, and Delhi.

Reason 2: MPLS offers secure private connectivity and quality-of-service features for business-critical inventory and logistics applications.
